Education

B.S. University of California, Los Angeles, Statistics and Data Science

Los Angeles, CA, USA

Sept 2021 – June 2025

Experience

Department of Statistics, UCLA, Statistics Curriculum Consultant

Remote

End-to-end design of a Bayesian statistics module for an upper-division UCLA course.

June 2026 – present

3 months

- Translate current research literature into lecture material, worked estimation examples, and graded assignments packaged for instructor reuse.
- Write original expositions of each method's estimation approach and its assumptions, with original diagrams, sufficient for an instructor to teach the method from the write-up alone.
- Devised per-student parameterized assignments with variant parameters hashed from student identifier, checked against known analytic results, resistant to answer sharing and language-model submissions.
- Built the authoring toolchain and a test-backed Jupyter notebook assignment deployed in Canvas.

LivaNova, Data Management and Strategy

Houston, TX

Established recurring measurement of enterprise cloud consumption.

May 2025 – Apr 2026

1 year

- Selected telemetry that actually measured cost and utilization, chose statistics to publish, and fixed how each estimate would be computed before building.
- Trained time series forecasting and anomaly-detection models on consumption data; surfaced idle and over-provisioned spend.
- Built ELT pipelines in Azure Synapse Analytics and Azure Data Factory, replacing a monthly email report and cutting reporting lag from roughly 30 days to near real time.
- Produced published estimates in SQL, Python, and Power BI and the dashboards reporting them; documented data lineage, model assumptions, and limitations for non-technical reviewers.

UCLA Statistical Consulting Center, Statistical Consultant

Los Angeles, CA

Sole owner of the institutional-factors research question within a five-person team, from analysis plan to presentation of recommendations to the client.

Mar 2025 – June 2025

4 months

- Scoped the institutional-factors question for UCLA Academic Planning and Budget into an analysis plan and presented recommendations to the client.
- Assembled the data layer from College Scorecard and NCES IPEDS records (2004-2023) joined on CIP codes; cost-adjusted earnings against scraped county living-wage estimates; imputed missing fields by chained equations with random forests.
- Derived peer groups by HDBSCAN clustering; ranked index drivers by cross-validated LASSO and random-forest importance.
- Delivered findings as an interactive Dash/Plotly dashboard with pinned dependencies, reproducible by the client unaided.

Department of Statistics, UCLA , Undergraduate Researcher Studied methodological change across 136,238 arXiv records with a pre-registered estimation approach. - Designed a study of methodological change across 136,238 arXiv records; fixed estimation approach and analysis plan before running anything; deduplicated records and measured how dropping incomplete records shifted corpus composition. - Built a hybrid topic-classification pipeline over LDA, BERTopic, and transformer embeddings; required agreement across all three methods before treating an assignment as an estimation input. - Trained and validated a LightGBM model forecasting research-output trends by topic; evaluated stability across topic groups of very different sizes.	Los Angeles, CA Jan 2025 – June 2025 6 months
Bruin Sports Analytics, UCLA , Researcher and Analyst Bayesian sequential inference over NFL play-by-play data, adopted by UCLA coaching staff. - Estimated NFL route-target probabilities by Bayesian updating over nflfastR play-by-play data, with posteriors revised sequentially as observations accumulated. - Designed recurring match-report visualizations of rate and frequency estimates; adopted by UCLA men's tennis coaching staff for opponent scouting.	Los Angeles, CA Sept 2024 – June 2025 10 months
Halliburton , Data Science and Machine Learning R&D Intern Time series modeling for predictive maintenance over truck-sensor telemetry targeting failures that put field operators at risk of injury. - Built and trained a transformer model for sequential anomaly detection from scratch, reaching 92% precision at 95% accuracy on held-out data under a time-aware validation split. - Benchmarked competing estimators by reproducing published approaches against established baselines on common held-out data. - Wrote a Dask multiprocessing pipeline generating and streaming synthetic training data matched to the observed telemetry distribution, clearing a throughput bottleneck on CUDA-accelerated training.	Houston, TX June 2024 – Sept 2024 4 months
Neoage Services , Data Analyst Intern Automated bank-statement generation with a Python pipeline. - Automated bank-statement generation with a Python pipeline, cutting production time by roughly 95% relative to the prior manual process. - Wrote a parser extracting structured fields from unstructured raw statement pages, reducing manual transcription errors.	Houston, TX June 2023 – Sept 2023 4 months
CityLab at UCLA , Module Director Directed hands-on biotechnology lab sessions for visiting high school students and co-designed the instructional modules taught in them. - Directed hands-on biotechnology lab sessions for visiting high school students. - Co-designed the instructional modules taught in them.	Los Angeles, CA Jan 2022 – Dec 2024 3 years

Publications

Research on Research on Research: Analyzing Historical Trends in Statistical and Computational Research Contributed talk (presenter) Naren Prakash (Undergraduate Research Week, UCLA)	May 2025
A Bayesian Approach to Play Prediction Contributed talk (presenter) Naren Prakash (Bruin Sports Analytics Showcase, UCLA)	Dec 2024

Autoencoders for Predictive Maintenance
